

School of Risk Management

Curriculum Guide

Architects and Engineers Edition

November 2021 edition

TABLE OF CONTENTS

The School of Risk Management	1
What it Does for You	1
Save Money	1
Associate Curriculum: 12 courses	2
Project Design Professional Curriculum: 23 courses	4
Project Manager Curriculum: 31 courses	7
Senior Manager Curriculum: 35 courses	9
Additional Courses: 2 courses	11
Anti-Harassment Courses: 6 courses	12
Ethics Courses: 7 courses	13

Overview

The School of Risk Management

The School of Risk Management is our comprehensive continuing education program. The e-learning education component provides accredited coursework on risk management topics for design professionals of all types and design firms of all sizes. In addition, the courses have been packaged to address the learning needs of these four roles within a firm:

1. Associate
2. Project Design Professional
3. Project Manager
4. Senior Manager

Each role has a dedicated curriculum with accredited learning units that can be completed in a timeframe designated by firm leadership. Courses are accredited by national and state regulatory bodies to meet CE/PDH requirements (hours vary by state). Any and all courses included within the Victor recommended curricula can be accessed and used individually as firms see fit. A breakdown of each curriculum starts on the next page.

What it Does for You

Firms spend considerable time, money, and resources defending and managing claims. Firms can reduce these costs, and mitigate their risks with the School of Risk Management. It was created in response to requests from our insureds that embedding stronger risk management practices into firm culture was challenging and an easy solution was needed. The School of Risk Management responds to this need by helping firms:

- Reduce the cost and effort of providing risk management training to employees

- Expedite onboarding/training for new employees
- Offer on-demand educational platform
- Support employees' needs to optimize tracking and reporting of CE credits
- Avoid and mitigate liability claims
- Improve project efficiency, performance, and client satisfaction
- Maintain a strong financial outlook by managing emerging business risks
- Optimize strategic planning with sound risk management protocols
- Protect reputation and brand

Save Money

The School of Risk Management can save firms money in several ways:

- **\$2,300 continuing education savings:** up to \$2,300 per licensed employee in course offerings, plus savings on time, travel, and related expenses
- **12% premium savings:** up to 12% on next policy renewal* (for firms with less than \$5 million in annual billings; *savings will vary depending on state)
- **Long-term savings:** embedded risk management culture will lead to fewer claims and long-term premium stability

Associate Curriculum: 12 courses

The Associate Curriculum will establish a baseline knowledge in professional liability and provide risk management guidance on core risk management concepts.

The 12 courses listed below are unique to the Associate Curriculum. They are core courses and the foundation for more advanced courses.

Bidding or Negotiation Phase Risk Management

This course will provide design professionals with useful tips and best practices to use during the bidding and negotiation phase. This phase involves assisting the owner throughout the process, from obtaining bids all the way through helping the owner and owner's legal counsel with awarding the construction contract.

Concepts in Risk Management

This course is the foundation for all risk management learning. Design professionals will learn the basics of identifying project risks and important ways to manage those risks to minimize unfavorable outcomes. Learn about the sources of project risk and gain a better understanding of strategic options in risk management.

Construction Phase Risk Management

This course will show design professionals the importance of managing risk early and clearly within the contract documents and the selection of the contractor. It will help design professionals navigate important risk management procedures that align with the roles and responsibilities of the design professional versus the contractor.

Cyber Liability

Design firms face an increased exposure to cyber risks and liability through an increased use and dependency on technology. Every firm should have digital protection protocols in place to minimize data breaches and manage those breaches when they occur. Firms can use this course to learn more about what they can do to get ahead of this issue and avoid the professional practice and overall business liability implications of this increasing digital threat.

Design Liability in a Changing Climate

Society faces rapid climate change and extreme weather events, and antiquated codes and standards do not adequately address the demands of climate volatility. This course can help design professionals understand their legal duty to meet an ever-changing standard of care while responding to climate change in a way that puts the security and well-being of users and the community above the immediate financial interests of the client to design to minimum standards. Design professionals must also understand the legal environment where foreseeability of harm and the duty to design to a higher standard of care may increase their professional liability exposure beyond their contractual liability exposure.

Developing the Capacity to Manage Risk

Managing risk in a design firm requires a commitment to best practices. This course will help design firms honestly assess their current capacity for managing risk and assist firms in developing important best practices and implementing robust capabilities for successful future practice.

Evaluation of Projects and Clients

Design firms must carefully evaluate whether a project is really the best fit from a risk management perspective. This means projects should be evaluated from a number of perspectives, including whether or not the design professional can effectively add value during the planning, design, and construction phases. Similarly, the design professional must consider whether or not the project meets the firm's goals with respect to geographic location, project type, potential profitability, likelihood of disputes or problems, enhancement of reputation, and the prospect

that the project will lead to future work. This course will support design firms in considering these implications.

Five Legal Cases Every Design Professional Should Know

This course will help firms avoid potential legal pitfalls when negotiating and delivering projects. Cases that will be examined include the legal opinion that created the Spearin doctrine, which has been the basis of construction law for over a century, the Hyatt Regency walkway collapse, and newer cases that have influenced the risks of design firms and contractors on issues ranging from consequential damages for delays to the exposures faced when incorporating new or untested materials into designs.

Intellectual Property: Protect Yourself and Your Compensation

This course looks at copyright law—including the 1990 Architectural Works Copyright Protection Act that provides special treatment for designs—and how licensing or transferring ownership and copyright can be accomplished while preserving protection for the design professional. A deliverable is simply documentation of the creative design process and tangible expression of the intellectual property of design firms. Protecting this status gives design professionals leverage to collect fees and control use of designs by clients and third parties.

Legal Liability of Design Professionals

Professional liability consists of those obligations that are, or will be, legally enforceable and that arise out of the performance of, or failure to perform, professional services by the design professional. This course will provide an overview of the legal principles underlying professional liability and will help design professionals recognize the implications in practice.

Planning Phase and Design Phase Risk Management

Project planning begins with development of a clear, coherent definition of the project along with a plan for performing the scope of services provided for in the owner-design professional agreement. This course addresses the design professional's contractual and functional responsibilities in performing planning and design services under the EJCDC and AIA standard forms of agreement and emphasizes those activities that are critical to effective risk management.

Understanding the Value of Professional Liability Insurance

Professional liability (PL) policies are designed for a specific risk—the risk of loss caused by the negligent performance of professional services. Design professionals and their clients need to understand the unique features of the PL policy and how to effectively transfer the risk of negligent performance when specifying PL insurance requirements. This course will explain “claims-made” coverage, the extent of contractual liability coverage, and how broad indemnity obligations challenge coverage, among other topics.

Associate Curriculum Required Reading

Each curriculum has its own reading list that we recommend employees complete in addition to the courses. The reading list is available once you've enrolled in a particular curriculum.

Project Design Professional Curriculum: 23 courses

The Project Design Professional Curriculum will increase awareness of the interrelationship between design and professional liability and provide risk management guidance on core and advanced risk management concepts.

The first 11 courses listed below are unique to the Project Design Professional Curriculum. They build off the 12 courses in the Associate Curriculum.

Alternative Methods for Project Delivery

As market forces and technological innovations change design and construction, alternative methods of project delivery have become more popular. The traditional design-bid-build project delivery process includes procedures and legal requirements that are well-known. This sequential approach to project delivery is being challenged by varying forms of construction management, program management, design-build, bridging, and integrated project delivery.

Contracts for Professional Services

Clear, concise contract terms substantially reduce the risk of business and financial disputes, as well as the risk of professional liability claims with clients. Contracts have long been recognized as essential risk management tools. This course provides an overview and discussion of the types of contracts and project-specific and general contract terms commonly used in the procurement of professional services.

Dispute Prevention and Resolution

This course will focus on success in preventing disputes and mitigating those that cannot be prevented through appropriate action when a dispute occurs. Managing the risks and consequences of disputes affects the ability of all parties involved on a project to put a capital asset in place. Disputes also risk delays, deficient design or construction, or project compromises that could impact public health and safety.

Emerging Practice: Building Information Modeling and Integrated Project Delivery

This course reviews the changes caused by the use of BIM and the exposure of firms using BIM in an IPD context. The rapidly evolving use of technology throughout the design process and during construction is changing the practice management of firms and their exposure to professional liability claims. Technological advances that modify the roles and responsibilities of design firms offer new opportunities, but also generate exposures that must be managed.

Insurance for Design Professionals

Insurance is a risk-transfer mechanism that is designed to allow an insured, for a price and under certain conditions, to transfer certain types of risk to an insurer. Without insurance, few, if any, construction projects could be undertaken on a prudent and financially sound basis. In this course, learn how an integrated, comprehensive insurance program is an essential component of a sound risk management program. For design firms, this should include professional liability insurance to cover the firm's liability in the performance of professional services.

Lessons Learned: How Case Law Informs Prudent Practice

This course will review cases involving a number of issues affecting the health, safety, and welfare of the public. Course content will discuss licensure issues faced by individuals and firms engaged in multi-state practice; how courts interpret and apply contracts on construction projects to protect the rights of project participants; and the insurance available to design professionals to protect owners and the public in the event of negligence on the part of a design professional.

Materials Transparency Movement

Materials transparency promotes the disclosure of the contents of building materials and documents the contents related to potential health and environmental impacts. This course looks at practice management issues and contractual language of which every design firm should be aware. As the standard of care for the design of projects evolves, it is likely that an increased awareness of the contents of building materials will be required of design professionals. Even now, contractual obligations will require design professionals to examine documentation provided by manufacturers during the design process. Endeavoring to promote materials transparency in the design process can provide design firms with new opportunities, but new business and professional exposures must be addressed.

Mitigating Risks and Protecting Profits During the Construction Phase

This course focuses on the role of the design professional in reviewing submittals, assessing substitution requests, responding to requests for information during the construction process, and evaluating construction quality. Learn about contractual language and procedures during the construction phase that design professionals can use to manage the risks to the public, the client, and their firms by providing an appropriate level of service at an appropriate level of compensation.

Planning for Success in the International Project Arena

In this course, learn how design professionals can become involved in international projects without adequate preparation. In addition to learning about local laws and customs, design firms need to be aware of the complex body of international laws, treaties, standards, and practices that have evolved to bring some uniformity to the international construction industry. Along with new skills and knowledge, firms must appreciate the many new sources of risk they will encounter and how to avoid or mitigate that risk.

Specialized Risks: Designing for Sustainability and Condo Projects

This course will cover the risks associated with green and condo projects. With the growing worldwide demand for resources, green building, with its focus on sustainability, recycled materials, efficient use of energy, water, and other resources, as well as lower operating costs, is becoming the new standard for design and construction. Sustainable construction has ushered in new exposures that could leave design firms open to professional liability claims. Likewise, the construction of condos can lead to professional liability claims that carry with them higher probability and severity of loss than most other construction exposures.

Strategic Planning for Design Professionals

This course describes the rationale for strategic planning and provides a strategic planning template. Such planning allows design professionals to design their firms to their own specifications. With a good strategic plan, all firm decisions align with long-term interests. Decisions regarding organizational structure, market position, and staffing requirements and training help advance the firm's goals.

Project Design Professional Required Reading

Each curriculum has its own reading list that we recommend employees complete in addition to courses. The reading list is available once you've enrolled in a particular curriculum.

The 12 courses listed below are core courses available in the Associate Curriculum:

- Bidding or Negotiation Phase Risk Management
- Concepts in Risk Management
- Construction Phase Risk Management
- Cyber Liability
- Design Liability in a Changing Climate
- Developing the Capacity to Manage Risk
- Evaluation of Projects and Clients
- Five Legal Cases Every Design Professional Should Know
- Intellectual Property: Protect Yourself and Your Compensation
- Legal Liability of Design Professionals
- Planning Phase and Design Phase Risk Management
- Understanding the Value of Professional Liability Insurance

Project Manager Curriculum: 31 courses

The Project Manager Curriculum will reinforce understanding of the impact of practice management on professional liability and provide risk management guidance on core and advanced risk management concepts related to contracts, project delivery, and dispute resolution.

The first 8 courses listed below are unique to the Project Manager Curriculum. They build off the 12 courses available in the Associate Curriculum and the 11 courses available in the Project Design Professional Curriculum.

Managing the Claims Process

Professionals who have had lawsuits filed against them say they would have been less anxious if they had known more about what to expect during the claims handling process. This course will familiarize firms with the sequence of events in a typical claim, and provide advice on how best to assist in defending the claim. It will also provide advice on what not to do. Having this knowledge can help firms obtain a greater sense of control and reduce the stress of a claim and its impact on their professional practice.

Managing the Risks of Various Project Delivery Methods

This course examines different delivery methods, the typical roles design firms have in each setting, and how to successfully manage a client's expectations and the risks that the design professional may have. Firms must understand their role on a project and how it is essential to successfully manage their risks. The project delivery method, whether it is design/bid/build, design/build, P3, or IPD, sets up the role of design firms and the relationships they have with other project stakeholders.

Negotiating Contracts with Clients

This course examines the riskiest provisions design firms face in client-generated professional services agreements, focusing on onerous provisions that corrupt the standard of care, transform normally insurable professional services into uninsured contractual responsibilities, or create risk and cost-shifting obligations that exceed professional liability insurance coverage. Examples from Victor's experiences reviewing contracts are compared to

standard language in AIA and EJCDC forms and focus on the contractual intent and associated risks of many client-generated provisions.

Preparing for Design-Build: What Design Professionals Need to Know About the Proposal and the Contract

In this course, an expert in design-build shares insights on design-build delivery. Design-build is different than other delivery methods and brings with it a different set of risks. Drafting the proposal and determining which, if any, standard form contracts to use are important first steps to manage expectations for all parties and lay the groundwork for a successful design-build project.

Risk and Coverage in Design-Assist and Delegated Design

This course looks at design liability exposures from the perspectives of the design team, the contractor, and specialty contractors and discusses how insurance coverage facilitates design-assist services from a contractor. Owners are promoting this approach because it brings the expertise of general contractors, construction managers, and trade contractors into the design process. Through early contractor involvement, designs are refined for constructability early in the process and information gaps, delays, and additional construction costs are minimized. If design-assist is improperly used or design elements are delegated to the construction team, problems can result.

The Business Implications for the 2017 Changes to AIA Documents: Part 1—B101

This course will examine the changes that are incorporated into the 2017 versions of AIA standard forms for professional services on tradition design-bid-build projects, focusing on B101. As the industry's leading contract forms, the AIA agreements influence how clients and the courts view design services and construction efforts. This course will identify the significant modifications and discuss the reasons behind them and their business implications.

The Business Implications for the 2017 Changes to AIA Documents: Part 2—A201

This course will examine the changes that are incorporated into the 2017 versions of AIA standard forms for professional services on tradition design-bid-build projects, focusing on A201. As the industry's leading contract forms, the AIA agreements influence how clients and the courts view design services and construction efforts. This course will identify the significant modifications and discuss the reasons behind them and their business implications.

Using Dispute Resolution Boards to Bring Projects in on Time and on Budget

This course discusses how design professionals can help owners develop a strategy to integrate dispute resolution boards (DRBs) on projects to facilitate bringing the project in on time and on budget. Used by government agencies and private owners, DRBs ensure project success through significant decreases in delays and extra costs by resolving potential disputes during construction instead of waiting until project completion. Use of DRBs promotes trust and increases communication between the owner, contractor, project manager, and design professional.

Project Manager Required Reading

Each curriculum has its own reading list that we recommend employees complete in addition to courses. The reading list is available once you've enrolled in a particular curriculum.

The 12 courses listed below are core courses available in the Associate Curriculum:

- Bidding or Negotiation Phase Risk Management
- Concepts in Risk Management
- Construction Phase Risk Management
- Cyber Liability
- Design Liability in a Changing Climate
- Developing the Capacity to Manage Risk
- Evaluation of Projects and Clients
- Five Legal Cases Every Design Professional Should Know
- Intellectual Property: Protect Yourself and Your Compensation
- Legal Liability of Design Professionals
- Planning Phase and Design Phase Risk Management
- Understanding the Value of Professional

The 11 courses listed below are courses available in the Project Design Professional Curriculum:

- Alternative Methods for Project Delivery
- Contracts for Professional Services
- Dispute Prevention and Resolution
- Emerging Practice: Building Information Modeling and Integrated Project Delivery
- Insurance for Design Professionals
- Lessons Learned: How Case Law Informs Prudent Practice
- Materials Transparency Movement
- Mitigating Risks and Protecting Profits During the Construction Phase
- Planning for Success in the International Project Arena
- Specialized Risks: Designing for Sustainability and Condo Projects
- Strategic Planning for Design Professionals

Senior Manager Curriculum: 35 courses

The Senior Manager Curriculum will increase awareness on business risk issues and elevate level of knowledge to improve profitability on core and advanced risk management concepts and important industry-related matters.

The first 6 courses listed below are unique to the Senior Manager Curriculum. They build off the 12 courses available in the Associate Curriculum, 9 courses available in the Project Design Professional Curriculum, and 8 courses available in the Project Manager Curriculum.

Implications of Current State and Local Government Fiscal Health on Project Pipelines

This course reviews recent trends in state and local fiscal health and what the major budgetary pressures are for governments. While many places have recovered from the recession, high debt burdens and a shrinking tax base in some places are constraining the pace of growth. Policymakers are anxious to make up for funding cuts, but are often looking to restore services via more innovative financing of projects and programs.

Managing Your Staff: How Do Firms Deal with the Intricacies of Employment Liability

This course discusses the challenges confronted by firms in the normal course of business operations. From the dangers of employee misclassification (including treating employees as independent contractors) to dealing with underproductive staff members, this course explores the “cans” and “cannots” of employment processes and decisions. Firms must be aware of what is required by law in benefits and behavior, as well as what are “best practices” in hiring, retaining, and disciplining employees.

Project Delivery for Public Works

This course addresses current legislative trends and the public policy movement toward codifying turn-key project delivery for public construction. Governments want simplified contractual schemes for public construction. One such contractual scheme, P3, is rapidly gaining traction. This course can help firms navigate this growing trend, get a glimpse into the pipeline of expected P3 projects, and help assess the trend’s impact and risk implications on business models.

Reduce Exposure and Get Insurance Credit for Doing So

Based on over 60 years of claims statistics, the Victor program provides premium and deductible credits for certain procedures and processes that firms incorporate into their practices and document in their project records. This course examines those credits and their associated processes and how they position design firms to mitigate their professional liability exposure.

Tailoring an Insurance Program for Your Firm Needs

This course will discuss those insurance policies unrelated to professional liability coverage that are essential in helping a design firm successfully manage the risk of unforeseen events. It will also discuss the role of cyber and privacy policies that provide coverage for business liability for a data breach involving sensitive information. At a time when firms are increasingly sharing digital information, firms need to understand their responsibilities to safeguard sensitive information and how cyber policies play a key role in protecting both the public and the client from harm.

The Changing Rules and Continuing Challenges of Employment Practices

This course addresses the current rules and latest case law that guide professional service firms in their treatment of employment conditions and practices. From necessary changes to accommodate same-sex spouses to the chaos surrounding state and federal differences on marijuana usage, how firms deal with employment practices is becoming increasingly complex. This course

provides advice on how firms can cope with the challenges of reducing employment issues and avoiding employee claims.

Senior Manager Required Reading

Each curriculum has its own reading list that we recommend employees complete in addition to courses. The reading list is available once you've enrolled in a particular curriculum.

The 12 courses listed below are core courses available in the Associate Curriculum:

- Bidding or Negotiation Phase Risk Management
- Concepts in Risk Management
- Construction Phase Risk Management
- Cyber Liability
- Design Liability in a Changing Climate
- Developing the Capacity to Manage Risk
- Evaluation of Projects and Clients
- Five Legal Cases Every Design Professional Should Know
- Intellectual Property: Protect Yourself and Your Compensation
- Legal Liability of Design Professionals
- Planning Phase and Design Phase Risk Management
- Understanding the Value of Professional Liability Insurance

The 9 courses listed below are available in the Project Design Professional Curriculum. The “Materials Transparency Movement” and “Mitigating Risks and Protecting Profits During the Construction Phase” courses are available as individual courses, but not part of the Senior Manager Curriculum:

- Alternative Methods for Project Delivery
- Contracts for Professional Services
- Dispute Prevention and Resolution

- Emerging Practice: Building Information Modeling and Integrated Project Delivery
- Insurance for Design Professionals
- Lessons Learned: How Case Law Informs Prudent Practice
- Planning for Success in the International Project Arena
- Specialized Risks: Designing for Sustainability and Condo Projects
- Strategic Planning for Design Professionals

The 8 courses listed below are courses available in the Project Manager Curriculum:

- Managing the Claims Process
- Managing the Risks of Various Project Delivery Methods
- Negotiating Contracts with Clients
- Preparing for Design-Build: What Design Professionals Need to Know About the Proposal and the Contract
- Risk and Coverage in Design-Assist and Delegated Design
- The Business Implications for the 2017 Changes to AIA Documents: Part 1—B101
- The Business Implications for the 2017 Changes to AIA Documents: Part 2—A201
- Using Dispute Resolution Boards to Bring Projects in on Time and on Budget

Additional Courses: 2 courses

The previous 37 courses can be taken individually or as part of the designated curriculum of which they are a part. The courses listed below are individual and not part of a particular curriculum, but they can be completed for credit like all other courses in the School of Risk Management.

Benchmarking and Claims Trends: Why Is It Important to You and Your Underwriter?

Actuaries collect and distribute claims data and identify trends that help underwriters evaluate a firm's risk. One of Victor's Large Firm underwriters discusses how claims data is also important in assisting the firms themselves to identify their risk and how to respond to it.

Tools to Help Mitigate and Reduce the Cost of Claims

Victor's professional liability program for design professionals provides coverage and reporting options that can help firms mitigate and reduce the cost of claims. Firms should know how to take advantage of features such as pre-claims assistance, the risk mitigation credit, and rectification coverage in the new policy.

Additional Course Packages Available

The packages listed below are available to Victor policyholders that enroll in the continuing education program at the School of Risk Management. While firms

can earn learning unit hours, they will not count toward potential Victor premium credits and other program benefits.

BUSINESS MANAGEMENT ESSENTIALS

These courses focus on the daily tasks of running a business, including time management, employee management and communication across different generations, managing staff in different locations, and many more.

CUSTOMER SERVICE ESSENTIALS

These courses address how employees and managers should manage customer interactions, complaints, and how to listen effectively to keep business relationships healthy.

Anti-Harassment Courses: 6 courses

Anti-harassment courses are required by some state licensing boards and in many states by business practice laws. The courses listed below are individual and not part of a particular curriculum, but they can be completed and applied to certain state professional licenses or business practice requirements. They might also be applicable to requirements of an employment practices liability insurance program.

Anti-Harassment Training for Supervisors and Managers: Non-State Specific

This course is designed to provide a comprehensive explanation of what sexual harassment is, how it can occur in the workplace, current legal positions, and how management can maintain a harassment-free workplace. Some of the topics that will be covered in this course include: behaviors that constitute sexual harassment, the different types of harassment including abusive conduct, what constitutes a hostile work environment, and how to handle complaints. This course is meant to be taken for general anti-harassment training and does not discuss the standards and/or regulations of any specific state.

Anti-Harassment Training for All Employees: Non-State Specific

Through real-life scenarios, this course will illustrate to all staff members how to recognize inappropriate behavior such as sexual harassment, bullying, and gender discrimination as well as ways to address and report unwelcomed conduct. This course, combined with your company's policies and commitment to combat all forms of harassment, will help foster an atmosphere of respect.

Anti-Harassment Training for Supervisors and Managers: California

This course will provide a comprehensive explanation of what sexual harassment is, how it can occur in the workplace, current legal positions, and how management can maintain a harassment-free workplace. Some of the topics covered in this course include: behaviors that constitute sexual harassment, different types of harassment including abusive conduct, what constitutes a hostile work environment, and how to handle complaints. If you're a manager in California, this course includes specific references to laws regarding sexual harassment training and is designed to be compliant with California standards.

Anti-Harassment Training for All Employees: California

Through real-life scenarios, this course will illustrate to all staff members how to recognize inappropriate behavior such as sexual harassment, bullying, and gender discrimination as well as acceptable ways to address and report unwelcomed conduct. This course, combined with your company's policies and commitment to combat all forms of workplace harassment, meets the training requirements for the state of California.

Anti-Harassment Training for All Employees: New York City and State

Through real-life scenarios, this course will illustrate to all staff members how to recognize inappropriate behavior such as sexual harassment, bullying, and gender discrimination as well as acceptable ways to address and report unwelcomed conduct. This course, combined with your firm's policies and commitment to combat all forms of workplace harassment, meets the training requirements for all of New York, including New York City.

Anti-Harassment Training for Supervisors and Managers: Connecticut

This course is designed to provide a comprehensive explanation of what sexual harassment is, how it can occur in the workplace, current legal positions, and how management can maintain a harassment-free workplace. Some of the topics that will be covered in this course include: behaviors that constitute sexual harassment, the different types of harassment including abusive conduct, what constitutes a hostile work environment, and how to handle complaints. If you are a manager in Connecticut, this course includes specific references to Connecticut laws regarding sexual harassment training. This course is designed to comply with Connecticut standards.

Ethics Courses: 7 courses

Courses examining the ethical obligations of professionals are part of some state licensing requirements. The courses listed below are individual and not part of a particular curriculum, but they can be completed for credit like all other courses in the School of Risk Management and applied to various state professional licenses either to meet specific requirements or as part of general continuing education credits.

Ethical Decision Making for Design and Construction Professionals

Designers, planners, architects, landscape architects, and engineers all need to know about and adhere to established codes of ethics. In this course, you will learn how to protect the public and the environment now as well as in the future.

Ethical Decision Making for Engineers #1

This course examines the NSPE *Code of Ethics*. Design professionals will review cases ruled upon by the NSPE Board of Ethical Review, which will be key to helping determine how design professionals should act when faced with ethical decisions. The course explore each of the six NSPE fundamental canons.

Ethical Decision Making for Engineers #2

Engineering is an important and learned profession. As a member of the engineering profession, professionals are expected to maintain the highest standards of honesty and integrity. To continue this effectiveness, the services that you as an engineer provide require honesty, impartiality, fairness, and equity, and must be dedicated to the protection of the public safety, health, and welfare. Engineers must adhere to a standard of professional behavior upholding the highest principles of ethical conduct. We call the standard of behavior “engineering ethics,” and embody it in the codes of ethics published by the state boards and by professional societies, such as NSPE.

In this second course, we will continue the direction of the NSPE *Code of Ethics* by looking at a few case studies and how the Code specifically applies in each case. We will look into a case involving the use of unlicensed software

to create work products. We will review the concept of conflict of interest. Finally, we will discuss cases involving licensure and practicing in different states.

Ethics: Shades of Green

This course will focus on how professional ethics are no longer black and white, they are shades of green. Not only do design professionals have an obligation to design for the health, welfare, and safety of the people they represent, they also have an obligation to safeguard the environment. This course will discuss why design professionals have a green ethical obligation to promote excellence in design and endeavor to conserve and preserve the integrity and heritage of the natural and built environment. Discussion

will focus on how professional societies and registration boards are holding design professionals accountable for sustainable design and planning practices and to consider the environment in everything they do.

Ethics for Land Surveyors: Decision-Making in Everyday Practice

Examining the ethics of an individual's actions, given a theoretical or "teaching" situation, is a standard method of appraising and judging professional practices. Many state boards of registration have promulgated either a "Code of Ethics" or a "Creed and Canons" with the intention of setting the bar for professional ethics. These guides are based on moral assumptions considered essential to our culture, and are the standards by which professionals are expected to make decisions, behave, and act.

This course examines seven situations that surveyors may commonly face, and discusses correct actions in the context of what the National Society of Professional Surveyors (NSPS) calls its "Surveyor's Creed and Canons." This course reviews the basic ethics and conduct expected of surveyors in professional practice.

Ethics for the Practicing Engineer: Managing Risks Imposed on the Public

All engineering designs and all operations of engineered systems expose the public to some risk. Engineers are ethically obligated to protect the public from unacceptable levels of risk, which raises the questions: How is risk defined and quantified? What levels of risk are acceptable? In this course, learn how to evaluate risks imposed on the public by engineers. Professionals will also learn ways to determine which risks are acceptable and which are unacceptable.

Ethics for the Practicing Engineer: Organizational Issues

Organizational issues can affect the decisions made by engineers every day. This course focuses on issues facing engineers working in large organizations. Case studies of organization-induced problems (such as the two space shuttle failures, the Macondo blowout, the GM ignition switch case) will be used to help participants recognize when organizational problems might cause ethical issues for engineers.
